Reviews

A whole new e book with a brand new standpoint. I have read through and i also am certain that i am going to planning to read again yet again later on. I found out this book from my i and dad advised this pdf to learn.

(Audrey Lowe I)

ALGEBRA (SECOND EDITION)

Pearson Education, 2015. Softcover. Book Condition: New. 2nd edition. Algebra, Second Edition, by Michael Artin, is ideal for the honors undergraduate or introductory graduate course. The second edition of this classic text incorporates twenty years of feedback and the authors own teaching experience. The text discusses concrete topics of algebra in greater detail than most texts, preparing students for the more abstract concepts, linear algebra is tightly integrated throughout. featuresHigh emphasis on concrete topics, such as symmetry, linear groups, quadratic number fields, and lattices, prepares students to learn more abstract concepts. The focus on these special topics also allows some abstractions to be treated more concisely, devoting more space to the areas students are the most interested inThe chapter organization emphasizes the connections between algebra and geometry at the start, with the beginning chapters containing the content most important for students in other fields. To counter the fact that arithmetic receives less initial emphasis, the later chapters have a strong arithmetic slantTreatment beyond the basics sets this book apart from others. Students with a reasonably mature mathematical background will benefit from the relatively informal treatments the author gives to the more advanced topicsContent notes in the preface include teaching tips from the authors own classroom experienceChallenging exercises are indicated with an asterisk, allowing instructors to easily create the right assignments for their class. Table of Contents 1. Matrices 2. Groups 3. Vector Spaces 4. Linear Operators 5. Applications of Linear Operators 6. Symmetry 7. More Group Theory 8. Bilinear Forms 9. Linear Groups 10. Group Representations 11. Rings 12. Factoring 13. Quadratic Number Fields 14. Linear Algebra in a Ring 15. Fields 16. Galois Theory Printed Pages: 560.
