

View on the Thermodynamics

By Alexander Maksimov

LAP Lambert Academic Publishing Aug 2014, 2014. Taschenbuch. Book Condition: Neu. 220x150x4 mm. Neuware - New approach explains well known equations and processes clearly. It is understandable state equation $PV=nRT$ has mental basis not empirical. Differential equation via temperature was deduced for specific heat of specie two constant with on the base of derivative formula. Constants are characteristics of concrete specie. The results conform table data well. The equation adds logical description of thermodynamics. Gibbs energy is calculated via temperature on the base of specific heat. Initial value at zero is defined by experimental coordinates. Method of phase equilibrium calculation has been developed. Example of water - vapour equilibrium calculation showed good conformation to experimental data. That probably can explain the difference of real gas to perfect one by the presence of condensation quantity in the mix. New approach joins two method of analysis: functions and processes. 68 pp. Englisch.

Reviews

This is the finest book i have got study till now. It usually does not price a lot of. I found out this publication from my i and dad encouraged this book to understand.

-- **Jamil Collins**

Absolutely among the best book I have possibly go through. I have go through and that i am certain that i am going to gonna read through once again again in the future. I am just delighted to tell you that this is basically the finest book i have got go through within my personal existence and could be he finest book for ever.
